DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8, 10-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Hopkins et al.

Hopkins et al. shows a water irrigation system comprising a computer system comprising regional evapotranspiration, a sensing unit configured to assess climatological conditions near or in a zone to be irrigated and to provide output that is a function of the climatological conditions to the computer system, wherein the computer system is configured to assess zonal evapotranspiration at least partially based on the output provided by the sensing unit (Column 3, lines 64-65), and wherein the computer system is configured to assess an irrigation need of the zone to be irrigated at least partially based on the regional evapotranspiration and the assessed zonal evapotranspiration (Column 4, lines 65-68 and Column 5, lines 1-2). The irrigation also comprises one or more valves that are operated by the computer system as recited in claim 11. The device of Hopkins et al. is capable of carrying the methods as recited in claims 15-20.

Claim Rejections - 35 USC § 103

Art Unit: 3752

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hopkins et al. in view of Oliver.

Oliver teaches a water irrigation system comprising a computer system comprising regional evapotranspiration , wherein the computer system is configured to assess the irrigation need of a zone to be irrigated based on a type of vegetation in the zone. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the system of Hopkins et al. by incorporating the ability to assess the irrigation need of a zone based on a type of vegetation as taught by Oliver in order to optimize irrigation requirements in a zone.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Davis D. Hwu whose telephone number is 571-272-4904.
